* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 5th July, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1952	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—under 1 year.	1-4 years.	5-14 years.	15-24 years.	25-34 years.	35-44 years.	45-54 years.	55-64 years.	65-74 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 5th July, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. * See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 5th July, 1952.

aily Notes

Sunday—Cloudy to fair in early morning, then fine. Dew in morning.

Monday—Fine, except for a period around mid-day, when fair. Dew in morning.

Tuesday—Generally fine, with periods in morning and around mid-day, when fair. Shallow mist in early morning. Fresh wind 19.05h.—19.10h. (E). Dew in morning.

Wednesday—Fine at first, then mainly cloudy. A light shower at mid-day. Intermittent light rain in evening, becoming ight to moderate, heavy at 23.25h. Fresh wind 02.20—30h. (SW), 12.10—15h. (WSW), 12.50h.—13.55h., 14.10—30h. (W), 0h.—20.25h. (N).

Thursday—Cloudy. Light to moderate rain early, intermittent in morning, then continuous light to moderate, heavy at imes, until evening. Fresh NE wind 14.35—40h., 15.15h.—19.25h., 20.40h.—21.30h., 22.40h.—24h.

Friday—Cloudy until mid-afternoon, then fair to cloudy, becoming fair to fine in evening. Light to moderate rain early, eavy 00.50h.—01.25h. Fresh wind 00h.—05.40h. (NE), 07.25h.—08h., 09h.—20.30h., 21.30h—22.20h. (ENE).

Saturday—Fair at first, then cloudy for a time in morning, becoming fine until mid-evening, then fair. Fresh wind 1.20h. (ENE), 05.30h. (NE), 07h.—08.15h., 09h.—09.30h., 10.30h.—21.20h. (ENE).

The reading of the barometer rose from 1020.8 mbs. at beginning of week to 1024.6 mbs. at 10.20h. on 30th, fell to 012.6 mbs. at 03.35h. on 2nd, rose to 1030.7 mbs. at 02.10h. on 5th, fell to 1021.6 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the arometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived rom photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright unshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum minimum and nean readings for each day (in milligrammes per cubic metre) in columns 12 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London. (b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 12th July, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page* 2).

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1952	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—under 1 year.	1-4 years.	5-14 years.	15-24 years.	25-34 years.	35-44 years.	45-54 years.	55-64 years.	65-74 years.	75 years and over.

BE49	Suicide	218	4	–	–	–	–	–	–	–	–	1	3	

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 12th July, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. * See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 12th July, 1952.

Daily Notes

Sunday—Fair at first, and for a time in morning, otherwise generally cloudy until mid-evening, then fair. A slight shower in afternoon, light to moderate rain in late afternoon and early evening, heavy 18.05—18.15h. Fresh SW wind 15.55—16.05h., 17.10—17.20h.

Monday—Fair, except for a period around mid-day, when cloudy. Fresh wind 09.30—40h. (S), 10.30—45h., 1105h.—12.05h., 12.30h.—17.30h., 18.10—20h., 20.30—50h. (SSW).

Tuesday—Fair at first, then generally cloudy until mid-evening, becoming partly cloudy to cloudy.

Wednesday—Fair early, then cloudy most of day, becoming fair in evening. Dew in morning and evening.

Thursday—Fair at first, then cloudy until mid-morning, becoming fair; mainly fair in afternoon and evening, except for a period in early evening, when fair. Dew in morning.

Friday—Cloudy, becoming cloudless around 06h., afterwards generally cloudy for rest of day. Intermittent light rain in evening, becoming continuous moderate to heavy until late evening, when light. Fresh wind 15.40h.—16.20h. (WSW), 16.50h.—17.10h., 18.30h.—20.30h. (SW).

Saturday—Generally cloudy, with short intervals when fair in morning.

The reading of the barometer fell from 1021.6 mbs. at begining of week to 1015.5 mbs. at 08.35h. on 6th, rose to 1026.2 mbs. at 09.10h. on 10th, fell to 1015.5 mbs. at 01.35h. on 12th, rose to 1019.3 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

ENGLAND AND WALES

BIRTHS AND DEATHS registered in the Quarter ended 30th June, 1952, with comparative figures for the second Quarters of three earlier years. (The customary analysis will appear in the Quarterly Return in due course).

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 19th July, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1952	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—under 1 year.	1-4 years.	5-14 years.	15-24 years.	25-34 years.	35-44 years.	45-54 years.	55-64 years.	65-74 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 19th July, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning S

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 19th July, 1952. } Certain Great Towns in England and Wales and four Scottish and Irish Towns.

Sunday—Cloudy at first, becoming fair, then mainly cloudy, except for a period in morning and around mid-day, en fair. Fresh wind 05.40h.—15.30h. (SW—WSW), 16.25h.—18h. (W—WSW). Gusts more than 38 m.p.h.:—08.50h. SW), 09h., 09.15h., 09.45h., 10h., 10.55h., 11.20h., 11.25h., (SW), 12.55h. (WSW), 14.15h. (SW).

Monday—Generally cloudy.

Tuesday—Generally cloudy.

Wednesday—Cloudy at first, becoming fair around 06h., then generally cloudy, except for a period in afternoon, when .

Thursday—Cloudy. Intermittent light rain in morning and afternoon; light showers in afternoon and evening and a derate shower at 15.50h., intermittent light rain late.

Friday—Cloudy. Intermittent light drizzle early; light drizzle in morning.

Saturday—Cloudy most of day, except for period in morning, when fair, becoming fair to fine in evening.

The reading of the barometer fell from 1019.3 mbs. at beginning of week to 1011.9 mbs. at 15.35h. on 13th, rose to 1.9 mbs. at 07.35h. on 16th, fell to 1013.1 mbs. at 03h. on 18th, rose to 1021.6 mbs. at end of week.

olanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the ometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column n millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived n photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 0. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright shine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and n readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

ENGLAND AND WALES

Estimates of Births.

(a) **Final estimate** of live births to be expected in the quarter ending **30th September, 1952** **166,000**

(b) **Provisional** estimate of live births to be expected in the quarter ending **31st December, 1952** **157,000**

In the above estimates regard has been had to (1) sample returns of the number of special ration books issued to expectant mothers by the Ministry of Food, and (2) the recent trend of registered live births. The sample comprises some 200 Food Office areas containing about 25 per cent. of the population.

Acute Poliomyelitis

Weekly notifications* of acute poliomyelitis in 1952 compared with those in 1951, 1950, 1949, 1948 and 1947.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 26th July, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 26th July, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 26th July, 1952.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

Daily Notes

Sunday—Fine at first, becoming fair in morning, afterwards generally cloudy. Dew in morning.

Monday—Generally cloudy.

Tuesday—Cloudy at first, becoming fine in morning; fair in afternoon until late evening, when cloudy. Very slight showers in afternoon. Dew in morning.

Wednesday—Cloudy at first, becoming fine for a time in eary morning afterwards generally cloudy. Thunder and lightning to SE at 13.40h. A very slight shower in afternoon.

Thursday—Cloudy most of day, becoming fair in late afternoon, fine in evening.

Friday—Fine most of morning, except for a period around 09h., when fair; becoming cloudy in early afternoon until end or day.

Saturday—Cloudy most of day, except for a period around mid-day, when fair; becoming fair again in evening.

The reading of the barometer fell from 1021.6 mbs. at beginning of week to 1019.4 mbs. at 15.50h. on 20th, rose to 1026.5 mbs. at 08.25h. on 24th, and fell to 1016.6 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Acute Poliomyelitis

Weekly notifications* of acute poliomyelitis in 1952 compared with those in 1951, 1950, 1949, 1948 and 1947.

* Not corrected for revision of diagnosis.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

†The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 2nd August, 1952. } **Great Towns, Greater London and four Scottish and Irish Towns.**

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 2nd August, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1952	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—under 1 year.	1-4 years.	5-14 years.	15-24 years.	25-34 years.	35-44 years.	45-54 years.	55-64 years.	65-74 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 2nd August, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. * See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 2nd August, 1952.

Daily Notes

Sunday—Fair in early morning, then generally cloudy, becoming fair in evening. Fresh NNW wind 09.15—20h., 15h.—15.10h., 15.20—30h. Dew in morning.

Monday—Fair early, becoming cloudy most of day. Fresh NNW wind 10.40h.—11h., 12.15—30h., 13.15h., 13.30—45h.

Tuesday—Cloudy at first, becoming partly cloudy in morning; cloudy in afternoon, becoming fair in early evening, then cloudy. Intermittent light drizzle in early morning.

Wednesday—Generally cloudy until late afternoon, then fair. Intermittent light drizzle in early morning.

Thursday—Fair in morning, with a period when fine around 06h, becoming cloudy in afternoon, then fair in evening.

Friday—Fair at first, then generally cloudy until mid-afternoon; afterwards fair. Light showers in morning and early afternoon, moderate at 12.50h. Fresh SW wind at times.

Saturday—Cloudy most of day, becoming fair to fine in late evening. Light and moderate showers in morning and afternoon. Fresh wind 08.40—45h. (SSW), 11h.—11.40h. (S).

The reading of the barometer fell from 1016.6 mbs. at beginning of week to 1010.9 mbs. at 19h. on 27th, rose to 1018.7 mbs. at 22.50h. on 30th, fell to 1003.4 mbs. at 15.25h. on 2nd, and rose to 1006.5 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Acute Poliomyelitis

Weekly notifications* of acute poliomyelitis in 1952 compared with those in 1951, 1950, 1949, 1948 and 1947.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 9th August, 1952, with totals from the first week of the year to date. **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 9th August, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings. Puerperal fever is included with puerperal pyrexia except in London.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever, (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia and Puerperal fever. N C	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning S

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 9th August, 1952.

Daily Notes

Sunday—Fine at first, becoming fair in morning, then generally cloudy, with fair periods in early afternoon. Fresh wind 07.20—25h., 09.25h., 13.20h. (WSW), 14.30h.—15.05h., 16.05h.—16.40h. (SW). Light to moderate showers at times throughout day, heavy at 14.55h.

Monday—Generally cloudy. Light to moderate showers, heavy at times, in morning and afternoon. Fresh winds 10.50h.—11h., 11.30—50h. (SW), 13.05—25h. (WSW), 16.55h.—17.05h. (SSW), 17.30—50h. (SW).

Tuesday—Generally cloudy. Light to moderate rain in early morning, heavy at 07h.—07.10h.; intermittent light drizzle and light and moderate showers in morning. Fresh winds 01.45h.—02.10 (SSW), 05.10—20h., 13.20h.—14.35h. (SW).

Wednesday—Generally cloudy. A heavy thunderstorm occurred in evening, with heavy rain 19.50h.—20.55h. The storm centre passed from NW—NE. Shallow mist in evening.

Thursday—Generally cloudy. Light to moderate showers at times during day, heavy at 15.15h. and at 19.15h. Light to moderate rain in evening. Mist in morning. Fresh wind 10.20—50h. (SSW), 11.50h.—13.30h. (SSW—SW).

Friday—Generally cloudy. Light to moderate showers in morning. Continuous light to moderate rain in evening, heavy 22.55h. Fresh SW wind at times in morning, 13.25h.—17.20 (SW—SSW). Gusts more than 38 m.p.h.:—15.05h. (SSW), 17.10h. (SW).

Saturday—Generally cloudy. Continuous light to moderate rain, heavy at times, morning and evening. Light and moderate showers, heavy at 15.05h., in afternoon. Fresh to strong wind 13.40h.—14.25h. (SW). Gusts more than 38 m.p.h.:—12.15h., 13.20h., 13.45h., 13.55h., 14.25h. (SW)

The reading of the barometer rose from 1006.5 mbs. at beginning of week to 1016.8 mbs. at 15h. on 4th, fell to 993.5 mbs. at 09h., rose to 999.2 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Acute Poliomyelitis

Weekly notifications* of acute poliomyelitis in 1952 compared with those in 1951, 1950, 1949, 1948 and 1947.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 16th August, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

1951 July	82,700	7,100	9,100	14,700	6,600	8,500	4,200	10,600	7,400	3,600	4,700	6,
(b) New claims to injury benefit.												
Week ended:—												
Aug. 12	9,500	1,500	1,500	1,400	1,000	500	300	700	700	300	300	1,

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 16th August, 1952.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

(Supplied by the Director of the Meteorological Office).

ily Notes

Sunday—Cloudy to fair at first, becoming fine for a time in early morning; then cloudy until early evening, becoming r to fine. Light to moderate showers in morning and early afternoon, heavy at 13.55h. Fresh wind 0.0h.—09.50h. (SW—SW), 10.10h.—16.50h. (WSW—W), 17.35—45h. (W).

Monday—Fine to fair at first, then cloudy, becoming fair in evening. Intermittent light drizzle in early morning. esh wind 11h.—11.15h. (SW), 12.15h.—14.35h. (SW). Dew in morning.

Tuesday—Fair early, then generally cloudy, except for a period in afternoon, when fair. Light rain early, a light ower in morning. Fresh wind 08.10—45h., 10.10—20h., 11h.—11.20h., 12.15h.—18.15h. (SW). Gusts more than 38 m.p.h.: .40h., 13.50h., 14h., 15.20h. (SW).

Wednesday—Fair most of day, except for periods around mid-day and 18h., when cloudy, becoming fine in evening. ttermittent light rain in early morning. Fresh wind 14.20h.—15.05h., 15.55h., 16.05—15h. (SW).

Thursday—Fine at first, fair in morning; then cloudy until mid-evening, when fair. Shallow mist in early morning. ew morning and evening.

Friday—Generally cloudy. Light to moderate showers in morning and early afternoon. Thunder and lightning at nes in afternoon; a heavy thunderstorm in late afternoon and evening, with hail at 17.20h. Mist in morning. Fresh wind .50h. (SE).

Saturday—Generally cloudy. A moderate to heavy shower in early morning; light showers in afternoon. Fresh wind 45h., 17h.—17.40h., 18h.—18.20h. (NNE).

The reading of the barometer rose from 999.2 mbs. at beginning of week to 1012.1 mbs. at 15.25h. on 11th, fell to 09.6 mbs. at 02.20h. on 12th, rose to 1016.2 mbs. at 09h. on 13th, fell to 1007.5 mbs. at 04h. on 16th, rose to 1016.4 mbs. end of week.

planatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the rometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived m photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 50. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright shine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and an readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Acute Poliomyelitis

Weekly notifications* of acute poliomyelitis in 1952 compared with those in 1951, 1950, 1949, 1948 and 1947.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 23rd August, 1952, with totals from the first week of the year to date. **London.**

(b) New claims to injury benefit.												
Week ended:—												
Aug. 19	11,800	1,900	2,000	1,400	1,400	1,000	400	900	700	400	500	1,4

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 23rd August, 1952.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

(Supplied by the Director of the Meteorological Office).

Daily Notes

Sunday—Cloudy to fair at first, then fine until early afternoon, becoming cloudy by 15h. until end of day. Shallow fog in early morning. Dew early.

Monday—Cloudy. Continuous light to moderate rain, heavy at times, most of day. Fresh wind 16.25h.—16.40h. (ENE).

Tuesday—Generally cloudy, except for a period in late afternoon and early evening, when fair. Light to moderate rain in morning; light and moderate showers in afternoon, heavy at 12.30h. Gust more than 38 m.p.h.: 18.10h. (NNE).

Wednesday—Generally cloudy. Continuous light to moderate rain in early morning, continuous heavy at times. Intermittent light rain late afternoon and early evening. Fresh wind 05.30h.—13.50h. (N-NE), 15.20h.—15.30h. (NNE).

Thursday—Cloudy early, then fine to fair in morning; cloudy until mid-evening, then fair. Dew morning and evening.

Friday—Fair until late afternoon, then fine. Dew morning and evening.

Saturday—Fine to fair at first, sky obscured by fog for a time in early morning, then fair, becoming fine in evening. Dew morning and evening.

The reading of the barometer rose from 1016.4 mbs. at beginning of week to 1017.7 mbs. at 10h. on 17th, fell to 1002.5 mbs. at 00.10h. on 19th, rose to 1025.2 mbs. at 21h. on 22nd, fell to 1021.3 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those ***registered*** in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Acute Poliomyelitis

Weekly notifications* of acute poliomyelitis in 1952 compared with those in 1951, 1950, 1949, 1948 and 1947.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 30th August, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

(b) New claims to injury benefit.												
Week ended:—												
Aug. 26	12,800	1,900	2,200	1,500	1,300	1,100	500	800	800	400	500	1,700

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 30th August, 1952.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

(Supplied by the Director of the Meteorological Office).

Daily Notes

Sunday—Fine until mid-morning, then fair, with a period in afternoon when cloudy, becoming fine in evening. Dew in morning.

Monday—Fine at first, becoming fair, then mainly cloudy. Dew morning and evening.

Tuesday—Generally cloudy, except for a period around mid-day and in early afternoon, when fair. Dew in morning.

Wednesday—Cloudy until late morning, then fair until late afternoon, afterwards cloudy. Fresh wind 11.30h.—19.35h. (WSW—W). Gusts exceeding 38 m.p.h.:—13.25h. (WSW), 16.55h. (W).

Thursday—Cloudy to fair at first, fine for a time in morning, then fair until mid-afternoon, afterwards fine.

Friday—Fine until mid-morning, except for a period around 06h., when fair; becoming cloudy by mid-day until mid-evening, then fair to cloudless. Dew morning and evening.

Saturday—Cloudless at first, then generally cloudy most of day, becoming fair in evening. A light shower in early morning, then intermittent light rain. Dew morning and evening.

The reading of the barometer fell from 1021.3 mbs. at beginning of week to 1016.6 mbs. at 17.35h. on 25th, fell to 1020.7 mbs. at 10h. on 26th, fell to 1013.4 mbs. at 16.55h. on 27th, rose to 1019.7 mbs. at 09h. on 28th, fell to 1004.8 mbs. at 14.30h. on 30th, rose to 1007.2 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Acute Poliomyelitis

Weekly notifications* of acute poliomyelitis in 1952 compared with those in 1951, 1950, 1949, 1948 and 1947.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 6th September, 1952, with totals from the first week of the year to date. } **London.**

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 6th September, 1952.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

Daily Notes

Sunday—Fair at first, then generally cloudy, except for a period around mid-day, when fair. Intermittent light rain in afternoon, light showers late. Fresh wind 12.20h., 12.45h. (WSW), 13-40—14.50h. (WSW—W).

Monday—Cloudy to fair early, then fine until mid-morning, becoming fair until early evening, then cloudy. Dew morning and evening. Fresh wind 14.10—14.15h. (W).

Tuesday—Cloudy until mid-day, then fair for a time in afternoon, becoming cloudy again. Intermittent light rain in morning. Dew in morning. Fresh wind 14—14.05h. (WNW).

Wednesday—Generally cloudy. Intermittent light rain in morning and evening, intermittent light drizzle in afternoon. Fresh wind 06.40—50h., 07.05h.—09.25h. (SW), 09.50h.—17.20h. (WSW—W). Gusts exceeding 38 m.p.h.:—11.40h. (W).

Thursday—Generally cloudy. Light to moderate rain, intermittent at times, in evening. Dew in morning.

Friday—Cloudy at first, fair for a time in morning, then cloudy until late afternoon, becoming fair to fine. Continuous light rain early, becoming intermittent. Light showers around mid-day and in early afternoon. Fresh wind 11.50h.—12h., 13.25—30h. (NNE), 14.05—20h. (N), 1505—15h. (ENE), 16.20—40h. (NE).

Saturday—Fair to fine at first, then generally cloudy. Haze in late evening. Dew and frost in morning, dew in evening.

The reading of the barometer rose from 1007.2 mbs. at beginning of week to 1022.6 mbs. at 22h. on 1st, fell to 1009.1 mbs. at 14h. on 5th, rose to 1012.2 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those ***registered*** in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Acute Poliomyelitis

Weekly notifications* of acute poliomyelitis in 1952 compared with those in 1951, 1950, 1949, 1948 and 1947.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

†The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 13th September, 1952. } **Great Towns, Greater London and four Scottish and Irish Towns.**

(*See notes on page 2*).

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 13th September, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1952	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—under 1 year.	1-4 years.	5-14 years.	15-24 years.	25-34 years.	35-44 years.	45-54 years.	55-64 years.	65-74 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 13th September, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

Daily Notes

Sunday—Cloudy. Light to moderate rain in morning, and a thunderstorm, with heavy rain at 11.55h. Light to moderate rain, intermittent at times, most of day. A period of gloom around 10.30h. Mist in afternoon. Dew in morning.

Monday—Generally cloudy. Moderate to light rain early. Continuous light to moderate rain, heavy at times, late evening. Mist in evening.

Tuesday—Cloudy. Light to moderate rain early; intermittent light rain in afternoon. Fresh wind 13.45—14.15h. (ESE).

Wednesday—Generally fine until mid-morning, then fair, but cloudy around mid-day, becoming fine late. Intermittent light rain in early morning, distant thunder in morning and a moderate shower. A light shower in afternoon. Fresh wind 19.30—40h. (NE), 12—18.30h. (ENE—E—ENE). Dew in morning.

Thursday—Fine at first, then generally cloudy, except for a period in afternoon, when fair. Continuous light to moderate rain, heavy at times, in evening. Fresh wind 12.20h., 13.15—25h., 14.15—25h. (N).

Friday—Generally cloudy until early afternoon, fair for a time in afternoon, cloudy to fine late. Continuous light drizzle and rain in morning. Dew in evening.

Saturday—Fine at first, becoming foggy from 03—05h. and then generally cloudy for most of day becoming fine again in evening.

The reading of the barometer fell from 1012.2 mbs. at beginning of week to 1011.8 mbs. at 04.00h. on 7th, rose to 1019.2 mbs. at 20.00h. on 8th, fell to 1013.1 mbs. at 14.00h. on 9th, rose to 1020.4 mbs. at 22.00h. on 10th, fell to 1012.5 mbs. on 12th and rose to 1026.7 mbs. at the end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included.*

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Acute Poliomyelitis

Weekly notifications* of acute poliomyelitis in 1952 compared with those in 1951, 1950, 1949, 1948 and 1947.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 20th September, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 20th September, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute poliomyelitis: Paralytic E	Acute poliomyelitis: Non-paralytic F	Acute encephalitis: Infective G	Acute encephalitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia N	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning S

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

Daily Notes

Sunday—Fine at first, becoming cloudy for rest of day. Intermittent slight drizzle mid-afternoon. Dew in morning.

Monday—Cloudy most of day, becoming fine late evening. Intermittent light rain around mid-day.

Tuesday—Fine at first, becoming fair during the day; fine again in evening. Mist and dew in evening.

Wednesday—Fog early, becoming cloudy most of day with continuous moderate and heavy rain during the evening, clearing later to become fine. Dew morning and evening.

Thursday—Fine becoming cloudy near mid-day; fine again in evening. Haze for a time in evening. Dew morning and evening.

Friday—Fine at first with slight frost, then cloudy with continuous light to moderate rain, clearing in afternoon, becoming cloudy in evening with intermittent slight rain.

Saturday—Cloudy at first, becoming fair until early afternoon, then cloudy. Intermittent light rain in evening. Dew in morning.

The reading of the barometer fell from 1026.7 mbs. at beginning of week to 1025.1 mbs. at 17.45h. on 14th, rose to 1031.0 mbs. at 23h. on 15th, fell to 1012.5 mbs. at 15.50h. on 17th, rose to 1021.8 mbs. at 09.35h. on 20th, fell to 1016.1 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 1 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those ***registered*** in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Acute Poliomyelitis, England and Wales.

Weekly notifications* of acute poliomyelitis in 1952 compared with those in 1951, 1950, 1949, 1948 and 1947.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

¶ Change of boundary, 1st April, 1952.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 27th September, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page* 2).

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1952	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—under 1 year.	1-4 years.	5-14 years.	15-24 years.	25-34 years.	35-44 years.	45-54 years.	55-64 years.	65-74 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 27th September, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute polio-myelitis: Paralytic E	Acute polio-myelitis: Non-paralytic F	Acute enceph-alitis: Infective G	Acute enceph-alitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia N	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning S

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

Daily Notes

Sunday—Generally cloudy until early afternoon, then fair to fine; cloudy again in evening, fine late. Continuous light to moderate rain early, becoming intermittent. Fresh wind 08h.—08.50h. (W), 10.10h.—13.30h. (W—NW), 14.25h.—17.30h. (NNW).

Monday—Fine to fair until early afternoon, except for a period around 06h., when cloudy; then cloudy becoming fair late. Dew morning and evening.

Tuesday—Fair early, then generally cloudy, becoming fine by late evening. Dew in morning.

Wednesday—Cloudy. Intermittent light rain in morning, early afternoon, and in evening; continuous light to moderate rain late, heavy 23.50h.—24h. Gusts exceeding 38 m.p.h.:—13.05h., 13.25—35h., 14.20h., 14.25h., 15.25h., 15.45h., 15.55h., 16.05h., 16.40—45h., 17.35—45h., 18h., 18.15h., 19.55h. (SW).

Thursday—Generally cloudy until late afternoon, becoming fair to fine; cloudy late. Continuous moderate to heavy rain early. Showers, heavy at 11.10h., and 14.47h., around mid-day and in afternoon. Fresh SSW—W winds at times.

Friday—Cloudy at first, becoming fair around 09h., and for a time in afternoon, but cloudy around mid-day; fair to fine in evening. Dew in evening. Fresh wind 0.0h.—15.30h. (WSW—W), 16h.—16.20h. (W). Gusts exceeding 38 m.p.h.:—09.40h., 11.10h., 12.10h. (W)

Saturday—Generaly cloudy until mid-evening, then fair. Showers in afternoon, heavy at 14.35h. and 15.06h. Fresh wind 09.45h.—15.20h. (WNW—NNW). Gusts exceeding 38 m.p.h.:—14.50h. (NNW). Dew morning and evening.

The reading of the barometer fell from 1016.1 mbs. at beginning of week to 1008.8 mbs. at 06.50h. on 21st, rose to 1024.5 mbs. at 10h. on 23rd, fell to 994.7 mbs. at 24h. on 25th, rose to 1009.0 mbs. at 24h. on 27th.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Acute Poliomyelitis, England and Wales.

Weekly notifications* of acute poliomyelitis in 1952 compared with those in 1951, 1950, 1949, 1948 and 1947.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 4th October, 1952, with totals from the first week of the year to date. **London.**

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 4th October, 1952. — Certain Great Towns in England and Wales and four Scottish and Irish Towns.

Daily Notes

Sunday—Fair at first, then cloudy. Continuous moderate to heavy rain in afternoon; light drizzle and light to moderate ain in evening. Fog in early morning. Fresh wind 11.15h., 11.30h., 11.45h.—12.50h. (S). Dew in morning.

Monday—Cloudy, becoming fair to fine in morning; then cloudy to fair. Fresh wind 11.55h.—12.05h., 13.15—25h., 4.45—55h. (WNW). Dew until 10h.

Tuesday—Cloudy. Light to moderate rain and drizzle, intermittent at times, from early morning until end of day, eavy rain at times. Mist for a time in morning. Fresh wind 11.05—15h., 11.40h.—12.15h. (E), 13.15h.—24h. (ENE—NNE).

Wednesday—Cloudy. Continuous light to moderate rain, heavy at times, in early morning. Intermittent light rain and rizzle morning and afternoon. Fresh wind 00.20h. (ENE), 04h.—04.20h. (N), 05.20h.—08.30h. (NNW—N), 11.40h.—12.10h. NW), 12.50h.—13.10h. (NW).

Thursday—Cloudy. Intermittent light drizzle and rain at times; a light shower in evening. Fresh wind 11.10h.—11.15h. WNW).

Friday—Cloudy. Intermittent light rain early and in early afternoon. Mist in late afternoon; fog in evening.

Saturday—Generally cloudy. Fog early; mist in morning.

The reading of the barometer fell from 1009.0 mbs. at beginning of week to 987.0 mbs. at 23.35h. on 30th, rose to 022.1 mbs. at 20.25h. on 3rd, fell to 1012.3 mbs. at 17h. on 4th, rose to 1013.9 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the arometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived om photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright unshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and ean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

GENERAL REGISTER OFFICE

CANCER REGISTRATION IN ENGLAND AND WALES

THIRD YEAR RECOVERY AND SURVIVAL RATES

A SUPPLEMENT TO No. 3 of the series of STUDIES ON MEDICAL AND POPULATION SUBJECTS.

This booklet contains tables showing the corrected Survival and Recovery Rates at the first and second and provisional rates at the third anniversaries of treatment for cases of primary cancer registered during 1945 and 1946, at the more important sites.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included.*

4. Births and deaths for Greater London, London and other Great Towns are those ***registered*** in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

Acute Poliomyelitis, England and Wales.

Weekly notifications* of acute poliomyelitis in 1952 compared with those in 1951, 1950, 1949, 1948 and 1947.

* Not corrected for revision of diagnosis.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 11th October, 1952, with totals from the first week of the year to date. } **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 11th October, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

Week ended:—												
Oct. 7	14,400	2,200	2,400	1,700	1,600	1,300	500	1,100	900	400	500	1,900

* See note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 11th October, 1952. } Certain Great Towns in England and Wales and four Scottish and Irish Towns.

(Supplied by the Director of the Meteorological Office).

aily Notes

Sunday—Cloudy at first, then generally fine, except for a period in afternoon, when cloudy, becoming fair in evening. ist late afternoon and evening. Dew in morning and evening.

Monday—Fair at first, then cloudy until early afternoon, becoming fine until end of day. Intermittent light rain and izzle in morning. Fresh wind 13.15h. (W), 13.50h.—16h. (W—WNW), 16.20h.—17h. (WNW—W). Dew in morning.

Tuesday—Fine to fair in morning, becoming cloudy by mid-day until mid-evening, then fair. Haze in late afternoon nd evening, mist later. Dew in morning.

Wednesday—Fine at first, sky obscured by fog for a time in morning, then generally fine, except for a period round 15h., when fair. Fog in early morning until mid-morning, thick 05.30h.—06.15h., 06.55h.—09.30h. Haze in ening. Frost in morning.

Thursday—Fine to fair at first, then cloudy rest of day. Intermittent light rain in morning and evening.

Friday—Cloudy at first, becoming fine until late morning; then fair to cloudy, becoming fair to fine in evening. rost in morning, dew in evening.

Saturday—Fine in morning, becoming fair around mid-day and in afternoon, then fine. Fog in morning and evening, ick 05-30h.—07h., and 21.45h.—24h.

The reading of the barometer rose from 1013.9 mbs. at beginning of week to 1018.0 mbs. at 12.25h. on 5th, fell to 008.4 mbs. at 14.45h. on 6th, rose to 1029.4 mbs. at 11h. on 8th, fell to 1017.2 mbs. at 17h. on 9th, rose to 1022.1 mbs. 21h. on 10th, fell to 1016.8 mbs. at end of week.

xplanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the arometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived om photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright nshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and ean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

GENERAL REGISTER OFFICE

CANCER REGISTRATION IN ENGLAND AND WALES

THIRD YEAR RECOVERY AND SURVIVAL RATES

A SUPPLEMENT TO No. 3 of the series of STUDIES ON MEDICAL AND POPULATION SUBJECTS.

This booklet contains tables showing the corrected Survival and Recovery Rates at the first and second and provisional rates at the third anniversaries of treatment for cases of primary cancer registered during 1945 and 1946, at the more important sites.

LONDON: HER MAJESTY'S STATIONERY OFFICE
1952
One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

ENGLAND AND WALES

BIRTHS AND DEATHS registered in the Quarter ended 30th September, 1952, with comparative figures for the Third Quarters of three earlier years. (The customay analysis will appear in the Quarterly Return in due course).

Third Quarter of:—	Live Births		Stillbirths		Deaths (including non-civilians)		Deaths of Infants under 1 year	
	Number	per 1,000 population	Number	per 1,000 total live and stillbirths	Number	per 1,000 population	Number	per 1,000 related live births
1952	**167,938**	**15·3**	**3,696**	**21·5**	**98,666**	**9·0**	**3,865**	**23·0**

* Not corrected for revision of diagnosis.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 18th October, 1952, with totals from the first week of the year to date. } **London.**

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 18th October, 1952. } **Certain Great Towns in England and Wales and four Scottish and Irish Towns.**

Daily Notes

Sunday—Fine at first, sky becoming obscured by fog for a time in morning, then generally cloudy. Intermittent light rain in morning; continuous to moderate rain in late evening. Fog in morning, thick 00h.—08h.

Monday—Cloudy. Continuous moderate to heavy rain, drizzle at times, until early afternoon. Light showers late afternoon and evening. Continuous light to moderate rain late, heavy 23.20—45h. Fresh wind 06.55h.—07.25h., 08.15h.—11.50h. (ESE), 15.20h. (SW).

Tuesday—Generally cloudy, becoming fair to fine in evening. Continuous light to moderate rain early, heavy 02.50h., 03.10—20h.; intermittent light rain and drizzle in morning. Light showers in afternoon. Fresh NNE wind 04h.—08.55h., 11h.—11.15h., 11.40h., 12h.—12.25h., 12.45h.—13.15h., 13.40h.—13.55h

Wednesday—Fine at first, sky obscured by fog in morning, then generally fine, except for a period in afternoon, when partly cloudy. Fog morning and evening; thick 02h.—09.50h., and 19.30h.—24h. Frost in morning, dew in evening.

Thursday—Sky obscured by fog, until mid-morning, then fair, becoming generally cloudy. Fog in morning, thick 00h.—10h.; fog in evening, mist late.

Friday—Cloudy to fair at first, then cloudy from mid-morning until mid-afternoon; afterwards fair to fine. Mist early; fog morning and evening. Dew morning and evening.

Saturday—Fair at first, then cloudy most of day. Fog in morning. Fresh wind 10.50h.—13.30h. (ESE), 17h.—17.30h. (E).

The reading of the barometer fell from 1016.8 mbs. at beginning of week to 984.1 mbs. at 21.35h. on 13th, rose to 1018.2 mbs. at 09.40h. on 15th, fell to 1015.3 mbs. at 05h. on 16th, rose to 1026.1 mbs. at 20h. on 17th, fell to 1018.3 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951, "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

Estimates of Births. England and Wales.

(a) **Final estimate** of live births to be expected in the quarter ending **31st December, 1952** **158,000**

(b) **Provisional estimate** of live births to be expected in the quarter ending **31st March, 1953** **170,000**

In the above estimates regard has been had to (1) sample returns of the number of special ration books issued to expectant mothers by the Ministry of Food, and (2) the recent trend of registered live births. The sample is derived from a proportion of the Main Consumer Office Areas containing about 30 per cent. of the population.

Acute Poliomyelitis.

Weekly notifications* of acute poliomyelitis in 1952 compared with those in 1951, 1950, 1949, 1948 and 1947.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 25th October, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

Abbreviated List No.*	Causes of Death	Deaths registered from 1st week of the year. 1952	Deaths registered during current week: All Ages.	Under 4 weeks	4 weeks—under 1 year.	1-4 years.	5-14 years.	15-24 years.	25-34 years.	35-44 years.	45-54 years.	55-64 years.	65-74 years.	75 years and over.

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 25th October, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

Oct. 21	14,700	2,100	2,300	1,800	1,600	1,400	600	1,000	900	500	600	1,800

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

Daily Notes

Sunday—Cloudy. Continuous light to moderate rain, heavy at times, until late afternoon, then moderate to light drizzle, becoming intermittent. Mist morning and evening; fog in afternoon. Fresh wind 06.05—30h., 07h.—07.05h., 09h.—09.40h. (E).

Monday—Cloudy. Intermittent light drizzle; continuous at times, until late afternoon, then light rain. Fresh wind 20.30h.—20.40h. (E).

Tuesday—Cloudy. Haze in evening. Dew in morning.

Wednesday—Cloudy, then fair to cloudy; cloudy in late evening. Continuous light to moderate rain in morning, heavy at times. A light shower in afternoon; continuous light to moderate rain late evening, heavy late. Haze, mist and dew in morning.

Thursday—Cloudy at first, fine in morning, then fair to cloudy. Continuous moderate to heavy rain early, becoming intermittent light. A light shower in afternoon. Dew in evening. Fresh wind 01.10—15h., 03.45h.—04h. (SSW), 11.55h., 12.10—20h. (WSW), 13.10—20h. (SW).

Friday—Cloudy at first, fine in morning, cloudy until mid-afternoon, then fine. Intermittent light rain early, showers in morning and afternoon. At mid-day, a thunderstorm, with heavy rain at 12.15h., passed from SW—NE, through S. There was a squall at 15.20h., with a gust exceeding 38 m.p.h.

Saturday—Fine at first, then fair, except for a period around mid-day, when cloudy; fair in evening. Light showers morning and afternoon. Fresh wind 00h.—00.25h., 05.30h.—06.50h. (SW), 07.30h.—13.20h. (SSW), 14.15h.—14.30h. (WSW), 15h.—15.45h. (SW).

The reading of the barometer fell from 1018.3 mbs. at beginning of week to 992.9 mbs. at 04.30h. on 23rd, rose to 1002.6 mbs. at 18.30h. on 2nd, fell to 994.6 mbs. at 06.30h. on 24th, rose to 1004.7 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 1st November, 1952, with totals from the first week of the year to date. } **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 1st November, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

Week ended:—												
Oct. 28	14,800	2,200	2,400	1,800	1,600	1,300	600	1,000	1,000	500	600	1,9

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 1st November, 1952.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

Daily Notes

Sunday—Cloudy at first, fine to fair until early afternoon, then fine again. Cloudy in evening. Fresh wind 10h.—0.05h. (WSW), 10.50h.—11h., 11.40h., 13h.—13.25h. 13.45—55h. (W), 14.10h., 14.20—45h. (WSW) Dew morning and vening.

Monday—Cloudy. Light rain in morning; intermittent light rain and drizzle in afternoon. Gusts exceeding 38 m.p.h.:—0.50—55h., 11.40—45h., 11.55h., 12.10h., 12.20h., 12.40h., 13.10h., 13.25h. (SSW).

Tuesday—Cloudy, becoming fair in evening. Continuous light to moderate rain, heavy at times, becoming intermittent n afternoon. Showers in afternoon and evening, heavy at 16.25h. and 16.35h. Gusts exceeding 38 m.p.h.:—03.20h., 04.10h., 4.40h., 04.50h.,—06.15h., 06.40h., 07h. (SSW), 15h., 17.20h., 17.30h. (SW).

Wednesday—Fair, becoming cloudy until mid-afternoon, then fair, fine in evening. Gusts exceeding 38 m.p.h.:—3.55h., 07.25h., 08.45h. (SW), 10.30—35h. (WSW).

Thursday—Fine to fair until around mid-day, when cloudy; becoming fair again, then cloudy for a time in early vening, fine late. A light shower in afternoon; light to moderate rain, heavy at 18.15h., in mid-evening. Fresh wind 4.20—30h. (W), 18h.—18.05h. (WNW). Dew in morning.

Friday—Fine to fair, then cloudy in morning and afternoon, becoming fine in early evening, but fair to cloudy fterwards. Continuous light to moderate rain late. Haze in late afternoon and early evening; fog for a time. Fresh wind 2h.—13.10h. (NNW).

Saturday—Cloudy, fair to fine in evening. Continuous moderate to heavy rain, intermittent at times, until mid-morning. A light shower in afternoon. Mist early.

The reading of the barometer rose from 1004.7 mbs. at beginning of week to 1015.1 mbs. at 23h. on 26th, fell to 002.6 mbs. at 07h. on 28th, rose to 1011.2 mbs. at 23h. on 29th, fell to 1006.5 mbs. at 17h. on 30th, rose to 1017.2 mbs. t end of week.

xplanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the arometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived om photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright unshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and ean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those ***registered*** in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

¶ Including 78 deaths resulting from the Harrow and Wealdstone train disaster.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 8th November, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 8th November, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

Week ended:—												
Nov. 4	14,900	2.300	2 300	1.800	1,600	1,300	600	1,000	1,000	400	600	1,

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 8th November, 1952.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

Daily Notes

Sunday—Cloudy. Intermittent light rain in morning, moderate to heavy, with mist around 10h. Continuous light o moderate rain, heavy at times, in afternoon and evening, becoming intermittent.

Monday—Cloudy at first, becoming fine most of day, except for a period in afternoon, when fair; fair in evening. Haze in late afternoon and evening, fog for a time, then mist. Fresh wind 00h.—13h. (W—NNW—N), 13.20—40h. (N). Gusts exceeding 38 m.p.h.: 00.25h. (WNW), 02.15—20h., 06.05h. (NW). Dew in evening.

Tuesday—Fair at first, becoming generally cloudy. Intermittent light rain in afternoon, becoming continuous light to moderate in afternoon and evening, heavy at 16.45—55h., 20.50h. Fresh wind 10.30h.—11.20h. (SSW), 11.50h.—17.10h. SW—SSW), 18.10h.—19.25h., 20h.—21.20h., 22.25h.—22.50h. (SSW). Frost in morning.

Wednesday—Cloudy. Light to moderate rain early; intermittent light rain, heavy at 11.05h., in morning. Intermittent ight drizzle in afternoon. Fresh wind 00.05h.—01.45h. (SW).

Thursday—Cloudy. Intermittent light rain and drizzle in morning and afternoon. Fresh wind 00h.—00.20h., 11.50h.—3h., 14.50h.—24h. (W). Fresh to strong 20.20h.—24h. (W). Gusts exceeding 38 m.p.h.: 20.40h.—24h. (W).

Friday—Cloudy until mid-morning, becoming fair around mid-day, then fine. Light and moderate showers early. Fresh vind 00h.—16.35h. (W—NW), fresh to strong 00h.—07.30h. (W—NNW). Gusts exceeding 38 m.p.h.: 00h.—07.10h. (W—NNW), gusts exceeding 54 m.p.h.: 00.30h. (WNW), 02.35h., 02.50h., 03.15—20h. (NW), 03.55h.—04h. (NNW).

Saturday—Generally fine. Fresh wind 04.10h.—05h. (NW), 07.50h.—13.05h. (NNW).

The reading of the barometer fell from 1017.2 mbs. at beginning of week to 1007.4 mbs. at 19.40h. on 2nd, rose to 027.9 mbs. at 00.30h. on 4th, fell to 1004.3 mbs. at 01.10h. on 7th, rose to 1020.2 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the arometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived rom photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright unshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and nean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

GENERAL REGISTER OFFICE

CANCER REGISTRATION IN ENGLAND AND WALES

THIRD YEAR RECOVERY AND SURVIVAL RATES

A SUPPLEMENT TO No. 3 of the series of STUDIES ON MEDICAL AND POPULATION SUBJECTS.

This booklet contains tables showing the corrected Survival and Recovery Rates at the first and second and provisional rates at the third anniversaries of treatment for cases of primary cancer registered during 1945 and 1946, at the more important sites.

GENERAL REGISTER OFFICE

THE REGISTRAR GENERAL'S WEEKLY RETURN FOR ENGLAND AND WALES

BIRTHS AND DEATHS, INFECTIOUS DISEASES, WEATHER

WEEK ENDED

SATURDAY, 15th NOVEMBER, 1952

Crown Copyright Reserved

LONDON: HER MAJESTY'S STATIONERY OFFICE
1952
One Shilling net.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those ***registered*** in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* Including influenzal pneumonia.

†The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 15th November, 1952. } **Great Towns, Greater London and four Scottish and Irish Towns.**

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 15th November, 1952, with totals from the first week of the year to date. } **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 15th November, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page 2*).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 15th November, 1952. } Certain Great Towns in England and Wales and four Scottish and Irish Towns.

Daily Notes

Sunday—Fine to fair at first, then generally cloudy. Intermittent light drizzle in late afternoon, becoming continuous moderate to light in evening, then intermittent again. Mist in morning until early afternoon. Frost in morning.

Monday—Generally cloudy. Intermittent light drizzle in morning. Intermittent light rain in evening, moderate to heavy for a time. Fresh wind 11.45h.—12.30h. (WNW), 13.50h.—19.25h. (W—NW), 20h.—21.25h. (WNW), 21.55h.—22h., 22.30h.—03.40h. (NW).

Tuesday—Cloudy at first, becoming fine most of day, but cloudy for a time in early evening. Fresh wind 10.45h.—11.30h. (N), 13.55h.—14h. (NNW). Haze and dew in evening.

Wednesday—Fine until early afternoon, then fair. Fog for a time in morning; haze and mist in evening. Frost in morning.

Thursday—Fair to cloudy until mid-morning, fine around mid-day and in early evening; cloudy for a time in afternoon, fair from mid-evening. Mist early and in morning. Dew morning and evening.

Friday—Fair to fine at first, then fair rest of day, with a cloudy period in afternoon, becoming fine from mid-evening. Fog for a time in morning and in evening, thick 19h.—24h. Frost morning and evening.

Saturday—Fine at first, then sky obscured by fog, thick 00h.—10h., until early afternoon. Mist and haze in afternoon and evening; fog for a time.

The reading of the barometer fell from 1020.2 mbs. at beginning of week to 1008.8 mbs. at 20.30h. on 10th, rose to 1027.6 mbs. at 23.10h. on 13th, fell to 1018.0 mbs. at 16.25h. on 15th, and rose to 1019.1 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 4 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included.*

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 22nd November, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 22nd November, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute polio-myelitis: Paralytic E	Acute polio-myelitis: Non-paralytic F	Acute enceph-alitis: Infective G	Acute enceph-alitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia N	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning. S

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 22nd November, 1952.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

Daily Notes

Sunday—Cloudy at first, sky obscured by fog, thick 04.30h.—08.55h., in morning, then cloudy. Fog until early afternoon. Intermittent slight snow in morning, and moderate rain, becoming intermittent in afternoon.

Monday—Cloudy until late afternoon, except for a period when fair around mid-day; becoming fine to fair in evening. A light shower in afternoon. Fog for a time in evening. Fresh wind 06.25—30h. (ENE), 13.55h.—14.20h. (NE), 14.30h. (ENE).

Tuesday—Fair early, then generally cloudy. Intermittent light drizzle in early afternoon, becoming intermittent light rain. Mist in late afternoon. Fresh wind 16.50h.—17.30h., 17.50h.—18h. (NE).

Wednesday—Cloudy. Intermittent light drizzle early, around mid-day, and in afternoon. Continuous light to moderate rain in morning, heavy at times; continuous moderate to heavy rain in evening. Gusts exceeding 38 m.p.h.:—11.50h. (NE), 12.30h.—13.10h. (ENE), 13.50h., 14h. (NE), 15h., 15.10h. (ENE), 16.20—25h. (NE), 17.55h., 18.35h. (ENE).

Thursday—Cloudy. Light to moderate rain early; intermittent light rain in evening. Mist in late afternoon and early evening.

Friday—Cloudy. Light to moderate rain and light drizzle at times, from early morning until late afternoon; light to moderate rain from mid-evening, heavy late. Fog from mid-morning until evening.

Saturday—Cloudy until late afternoon; fine in evening. Light to moderate rain until mid-morning, heavy at times; heavy sleet 04.40h.—05.50h. Fresh wind 05.10h.—11.50h. (NNE—N), 12.10h. (N), 12.30—35h. 12.50h.—14.20h. (NNW).

The reading of the barometer rose from 1019.1 mbs. at beginning of week to 1020.6 mbs. at 09.15h. on 16th, fell to 1015.6 mbs. at 04.45h. on 17th, rose to 1020.9 mbs. at 01.05h. on 18th, fell to 993.6 mbs. at 07.35h. on 21st, rose to 1011.5 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included.*

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 29th November, 1952, with totals from the first week of the year to date. **London.**

(*See notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 29th November, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

—	Scarlet fever.	Whooping cough.	Diphtheria.	Measles, excluding rubella.	Acute pneumonia (primary or influenzal).	Cholera. A	Plague. B	Meningococcal infection D	Acute polio-myelitis: Paralytic E	Acute polio-myelitis: Non-paralytic F	Acute enceph-alitis: Infective G	Acute enceph-alitis: Post Infectious K	Typhus fever. H	Relapsing fever. I	Continued fever. (London only). J	Dysentery. L	Ophthalmia neonatorum. M	Puerperal pyrexia N	Smallpox. O	Paratyphoid fever. P	Typhoid fever. R	Food poisoning. S

Week ended:—												
Nov. 25	14,300	2,100	2,300	1,700	1,600	1,300	600	1,000	1,000	500	600	1,800

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 29th November, 1952.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

(Supplied by the Director of the Meteorological Office).

Daily Notes

Sunday—Fine to fair until mid-morning, then cloudy until mid-evening, becoming fair to fine. Fog in morning, mist at times in afternoon and evening. Intermittent light rain in afternoon. Frost morning and evening.

Monday—Fine most of day, except for periods in morning and afternoon, when fair. Fog for a time in morning, then mist; mist in afternoon, fog in evening. Frost morning and evening.

Tuesday—Generally fine until early evening, except for period in morning, when cloudy; becoming cloudy in evening. Fog early and in morning, mist in late afternoon. Fresh wind 21.50h.—22h., 23.10h.—24h. (E).

Wednesday—Cloudy. Light to moderate snow, sleet and rain in afternoon; moderate to heavy snow and continuous heavy sleet, turning to light to moderate rain, with sleet at times in evening. Fog in evening. Gusts exceeding 38 m.p.h.:—05.15h., 11.20—50h., 12.55h. (E).

Thursday—Cloudy. Continuous light to moderate rain, heavy at times morning and evening; continuous light drizzle afternoon and early evening. Fog from morning until early evening. Fresh wind 19.40h.,—24h. (ENE—NE).

Friday—Cloudy until mid-morning, then fair; cloudy again in afternoon, and from mid-evening, otherwise fair to fine. Light to moderate rain and drizzle early, heavy 00h.—00.20h. Fog in late afternoon and evening. Fresh wind 00h.—08h. (E—NNE).

Saturday—Cloudy. Light to moderate sleet and light snow in afternoon, then moderate rain becoming heavy until end of day. Fog until early afternoon, then mist until mid-evening. Frost in morning.

The reading of the barometer fell from 1011.5 mbs. at beginning of week to 1008.5 mbs. at 15h. on 23rd, rose to 1011.9 mbs. at 19.35h. on 24th, fell to 992.1 mbs. at 07h. on 27th, rose to 1018.1 mbs. at 24h.on 28th, fell to 1011.8 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates " *higher* " and — " *lower* " than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

GENERAL REGISTRY OFFICE, SCOTLAND

Census 1951

GREAT BRITAIN

1% SAMPLE TABLES

A sample was taken of one per cent. of the 1951 Census records and analysed in advance of the main Census operations in order to present as quickly as possible a preview of the pattern of the main results which would not otherwise be available for some years. The tables relate to Great Britain and, with correspondingly less detail, to various smaller areas according to the size of their populations.

In particular, the information contained in these volumes will be of great value to Public Health Departments for Adminstrative Counties, County Boroughs, Metropolitan Boroughs and some of the larger urban areas in their work.

PART I contains information about Age and Marital Condition of the Population, Occupations, Industries, and Housing of Private Households.

Price 17s. 6d. net. By Post 17s. 10d.

PART II contains information about the Characteristics and Composition of Private Households, Non-Private Households, Education, Birthplace and Nationality, Fertility, Welsh and Gaelic Languages, and a Conurbation Supplement.

Price £2 0s. net. By Post £2 0s. 6d.

CENSUS 1951, GREAT BRITAIN, ONE PER CENT. SAMPLE TABLES

An example of the kind of interesting and useful information which can be obtained from these Sample Tables is given below, where figures extracted from the 1951 Census (Sample Volume, Part II) are compared with similar figures derived from the 1931 Census in respect of persons living in one of the countries of the United Kingdom and the Irish Republic but born in another of these countries.

(a) Population enumerated in **England** by place of birth includes the following:—

Where born	1931	1951
Wales	448,766	666,200
Scotland	357,306	560,300
Northern Ireland	68,148	143,300
Irish Republic	288,382	471,700
Ireland (part not stated)	7,040	5,700

(b) Population enumerated in **Wales** by place of birth includes the following:—

Where born	1931	1951
England	349,988	367,200
Scotland	9,180	12,600
Northern Ireland	1,908	3,700
Irish Republic	15,294	14,200
Ireland (part not stated)	317	—

(c) Population enumerated in **Scotland** by place of birth includes the following:—

Where born	1931	1951
England	164,299	210,600
Wales	4,341	11,900
Northern Ireland	67,905	41,100
Irish Republic	55,487	41,800
Ireland (part not stated)	904	400

This Report gives the results of the one per cent. sample taken from the 1951 Census records and analysed in advance to give a quick preview of the pattern of the main results which will not be fully available for some years. It is published by H.M.S.O. in two parts (Part I price 17s. 6d. net, Part II price £2 net).

(For **NOTES** see page 20.)

TABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See Notes on page 20*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 6th December, 1952, with totals from the first week of the year to date. **London.**

(*See Notes on page* 20).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 6th December, 1952. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page* 20).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 6th December, 1952.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

Daily Notes

Sunday—Cloudy, becoming fair to fine in evening. Moderate to heavy rain early, becoming intermittent light. Mist in morning; haze until late afternoon. Fresh wind 00.40—50h. (ENE), 02h.—02.10h., 07.40h.—13.25h. (NE).

Monday—Fine most of day, except for periods in morning and afternoon, when fair. Mist in afternoon and evening. Fresh wind 06.40h., 09.30h.—14.40h. (ENE). Frost in morning.

Tuesday—Fine until mid-evening, then fair to cloudy. Mist in morning, haze in afternoon, then fog for a time in evening, thick 17.30h.—18.30h.; mist until mid-evening. Frost morning and evening.

Wednesday—Cloudy at first, then fair until mid-morning, afterwards cloudless. Haze in evening. Fresh wind 02.50h.—05h. (N). Frost morning and evening.

Thursday—Fine to fair early; then generally cloudy until mid-evening, afterwards fair to fine. Haze in afternoon and early evening, then fog, thick 19.45h.—20.15h. Frost morning and evening.

Friday—Fine until mid-morning, then fair, sky becoming obscured by fog afterwards. Fog all day, thick 05h.—08.15h., 11.10h.—24h. Frost all day, rime in morning.

Saturday—Sky obscured by thick fog all day. Frost and rime all day.

The reading of the barometer rose from 1011.8 mbs. at beginning of week to 1026.2 mbs. at 10.50h. on 2nd, fell to 1020.6 mbs. at 02h. on 3rd, rose to 1037.9 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 8 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns" =London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those *registered* in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

* Including influenzal pneumonia.

†The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 13th December, 1952.

Great Towns, Greater London and four Scottish and Irish Towns.

(*See Notes on page 2*).

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 13th December, 1952, with totals from the first week of the year to date. **London.**

(*See Notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 13th December, 1952. — **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

Daily Notes

Sunday—Sky obscured by thick fog all day. Frost all day.

Monday—Sky obscured by fog until morning, then cloudy to fair until late afternoon, afterwards fine. Fog most of day, ick until mid-day, and from 16.45h. Frost morning and evening.

Tuesday—Fine at first, becoming fair, then cloudy most of day. Fog in morning, thick until 04.30h.; mist in afternoon. rost in morning.

Wednesday—Cloudy until early evening, then fair. Intermittent light drizzle and rain morning and afternoon; light to oderate rain late. Fresh wind 11.05—25h., 12h.—14h. (S), 16.15h.—17h. (SSW).

Thursday—Fair at first, then cloudy, except for a period around mid-day, when fair.

Friday—Cloudy at first, then fine to fair in morning, afterwards cloudy. A moderate shower early. Mist in afternoon nd evening.

Saturday—Generally cloudy, except for a period in morning, when fair, becoming fair to fine in evening. Continuous oderate to heavy rain early morning; light to moderate, heavy at times, in late morning and afternoon. Mist morning and fternoon.

The reading of the barometer rose from 1037.9 mbs. at beginning of week to 1038.7 mbs. at 11h. on 7th, fell to 982.6 bs. at 06.10h. on 13th, rose to 988.0 mbs. at end of week.

---

xplanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the arometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived om photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright nshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and ean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

GREAT BRITAIN

1% SAMPLE TABLES

A sample was taken of one per cent. of the 1951 Census records and analysed in advance of the main Census operations in order to present as quickly as possible a preview of the pattern of the main results which would not otherwise be available for some years. The tables relate to Great Britain and, with correspondingly less detail, to various smaller areas according to the size of their populations.

In particular, the information contained in these volumes will be of great value to Public Health Departments for Administrative Counties, County Boroughs, Metropolitan Boroughs and some of the larger urban areas in their work.

PART I contains information about Age and Marital Condition of the Population, Occupations, Industries, and Housing of Private Households.

Price 17s. 6d. net. By Post 17s. 10d.

PART II contains information about the Characteristics and Composition of Private Households, Non-Private Households, Education, Birthplace and Nationality, Fertility, Welsh and Gaelic Languages, and a Conurbation Supplement.

Price £2 0s. net. By Post £2 0s. 6d.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those ***registered*** in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

ABLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years. } **(a) London.** **(b) Great Towns in the aggregate.†**

(*See Notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

** Return not received.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 20th December, 1952, with totals from the first week of the year to date. **London.**

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 20th December, 1952. — **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page 2*).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 20th December, 1952.

Daily Notes

Sunday—Fine at first, then fair to cloudy, becoming fine again in evening. Mist for a time in morning and afternoon.

Monday—Fine at first, then cloudy at times, otherwise generally fine. Light to moderate snow early and in late afternoon, heavy at 16.45h. Fog in heavy snow. Gust exceeding 38 m.p.h.: 16.40h. (WNW).

Tuesday—Cloudy. Light to moderate snow early; then light to moderate rain and drizzle, heavy at times. Showers in evening, heavy 17.30h. Fresh wind 09.45h.—10h. (SSW), 14.15h.—18.40h. (SSW—WNW), 21.40—50h. (WSW).

Wednesday—Cloudy at first, then fine to fair until early afternoon, then cloudy. Continuous light to moderate rain in evening, heavy at times, sleet 18.10—15h. Fresh to strong wind 11.10h.—18.10h. (W—WNW), 22.30h.—24h. (NW—NNW). Gusts exceeding 38 m.p.h. at times. Gust exceeding 54 m.p.h.: 17.50h. (WNW).

Thursday—Cloudy. Fresh to strong wind 00h.—01.20h. 01.45h.—02.15h., 03.15h.—04.50h. (NNW). Gusts exceeding 38 m.p.h.: 00.10h., 00.40h.—01.05h., 02.15h., 04.15h., 04.50h. (NNW).

Friday—Cloudy. Continuous heavy rain early, then light rain and drizzle. Fog for a time in morning. A light to moderate shower in evening. Fresh wind 05.55h.—07.05h. (S).

Saturday—Cloudy. Light to moderate rain, heavy at times, in afternoon and evening. Fresh wind 13.30h.—20.30h. (SW—W); gust exceeding 38 m.p.h.: 19.50h. (W).

The reading of the barometer rose from 988.0 mbs. at beginning of week to 1005.7 mbs. at 23.10h. on 15th, fell to 982.4 mbs. at 01.10h. on 17th, rose to 1014.2 mbs. at 18h. on 18th, fell to 999.4 mbs. at 09h. on 19th, and rose to 1002.5 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

Census 1951

GREAT BRITAIN

1% SAMPLE TABLES

A sample was taken of one per cent. of the 1951 Census records and analysed in advance of the main Census operations in order to present as quickly as possible a preview of the pattern of the main results which would not otherwise be available for some years. The tables relate to Great Britain and, with correspondingly less detail, to various smaller areas according to the size of their populations.

In particular, the information contained in these volumes will be of great value to Public Health Departments for Administrative Counties, County Boroughs, Metropolitan Boroughs and some of the larger urban areas in their work.

PART I contains information about Age and Marital Condition of the Population, Occupations, Industries, and Housing of Private Households.

Price 17s. 6d. net. By Post 17s. 10d.

PART II contains information about the Characteristics and Composition of Private Households, Non-Private Households, Education, Birthplace and Nationality, Fertility, Welsh and Gaelic Languages, and a Conurbation Supplement.

Price £2 0s. net. By Post £2 0s. 6d.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those ***registered*** in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.
Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.

BLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See Notes on page 2*).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

Influenza — *Deaths	11	10	11	10	8	11	18	28	60	45	44	990	8,338	2,052

* Including influenzal pneumonia.

†The 160 Great Towns represent about 10 per cent. more population than the 126 Great Towns from which returns were received in years before 1952. The accumulated totals for 1951 and 1950 have been adjusted to produce figures approximately comparable with those shown for 1952.

TABLE II.—Births and Deaths (distinguishing Deaths of infants under 1 year of age) registered in the week ended 27th December, 1952.

Great Towns, Greater London and four Scottish and Irish Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term "Influenza" is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 27th December, 1952, with totals from the first week of the year to date. **London.**

(*See Notes on page 2*).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 27th December, 1952. — **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page* 2).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of "employed persons" under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 27th December, 1952.

Certain Great Towns in England and Wales and four Scottish and Irish Towns.

...Daily Notes

Sunday—Fine to fair in morning, cloudy around mid-day; then fair to fine, cloudy late. A moderate to heavy shower ...n early morning. Fresh wind 02.15h.—02.40h. (NW—NNW).

Monday—Cloudy. Intermittent light rain and drizzle at times in morning, afternoon and evening.

Tuesday—Generally cloudy, but a period when cloudless around 06h. Intermittent light to moderate rain in evening ...list and fog for a time in morning; mist in late afternoon and evening. Dew in morning.

Wednesday—Cloudy until mid-morning, fair until mid-afternoon, then fine. Light to moderate rain, heavy at times, ...n morning; a heavy shower at 15.40h., then a light shower. Gust exceeding 38 m.p.h.: 15.45h. (W).

Thursday—Fine until afternoon, then fair, becoming cloudy in evening. Light to moderate rain in afternoon and ...vening, heavy at times. Fresh wind 12h.—13h. (SW), 14.20h.—14.50h., 18.30—50h., 19.45h.—21h. (SSW), 22h.—22.35h. (SW). Dew and frost in morning.

Friday—Cloudy to cloudless at first, then cloudy, becoming fair to fine in evening. Continuous light to moderate rain ...n morning; heavy 09.50h., 10.30—40h. Mist in afternoon, then fog rest of day.

Saturday—Cloudy. Fog all day; thick 03h.—24h. Frost in morning; dew in evening.

The reading of the barometer rose from 1002.5 mbs. at beginning of week to 1019.3 mbs. at 06.10h. on 22nd, fell to ...012.9 mbs. at 19.55h. on 22nd, rose to 1020.6 mbs. at 10.30h. on 23rd, fell to 1006.3 mbs. at 04.15h. on 24th, rose to 1015.2 ...bs. at 10.40h. on 25th, fell to 1003.2 mbs. at end of week.

...xplanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the ...arometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column ... (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived ...rom photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended ...950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright ...unshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and ...ean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

GENERAL REGISTER OFFICE

AND

GENERAL REGISTRY OFFICE, SCOTLAND

Census 1951

GREAT BRITAIN

1% SAMPLE TABLES

A sample was taken of one per cent. of the 1951 Census records and analysed in advance of the main Census operations in order to present as quickly as possible a preview of the pattern of the main results which would not otherwise be available for some years. The tables relate to Great Britain and, with correspondingly less detail, to various smaller areas according to the size of their populations.

In particular, the information contained in these volumes will be of great value to Public Health Departments for Administrative Counties, County Boroughs, Metropolitan Boroughs and some of the larger urban areas in their work.

PART I contains information about Age and Marital Condition of the Population, Occupations, Industries, and Housing of Private Households.

Price 17s. 6d. net. By Post 17s. 10d.

PART II contains information about the Characteristics and Composition of Private Households, Non-Private Households, Education, Birthplace and Nationality, Fertility, Welsh and Gaelic Languages, and a Conurbation Supplement.

Price £2 0s. net. By Post £2 0s. 6d.

CENSUS, 1951, GREAT BRITAIN, ONE PER CENT. SAMPLE TABLES

Information about household arrangements

For the first time in this country a question was asked on a census schedule about the availability to private households of a piped water supply in their homes, fixed bath, water closet, kitchen sink and cooking stove. The replies make it possible to answer such questions as: how many households have their own fixed baths installed in their homes? How many households share toilet or washing facilities with another household?

Results for a one per cent. sample of the 1951 census schedules have been published in the above-named Reports for broad divisions of the country and for the larger County Boroughs and Administrative Counties, pending the fuller analysis which will be given in due course for all local authority areas. The following extracts indicate the nature of the information displayed and the variety of conditions encountered. The tables as published give actual numbers as well as percentages and distinguish between households sharing and households entirely without each type of arrangement.

Area	Proportion per 100 households who have to share the following arrangements with another household or do without them.					
	Piped water	Cooking stove	Kitchen sink	Water closet	Fixed bath	Either sink or stove
Great Britain						
All households	**17**	**8**	**13**	**23**	**45**	**14**

Urban areas with popn. under 50,000	22	15	25	19	54	26
Rural areas	38	14	37	46	60	40
Counties and County Boroughs (selected)						
Leeds C.B.	6	5	3	31	32	5
Sheffield C.B.	7	6	5	13	49	6
Nottingham C.B.	12	9	10	11	50	10
Coventry C.B.	17	12	15	16	37	15
Norfolk A.C.	48	16	37	56	63	40
West Sussex A.C.	11	4	6	14	27	6
Gloucester A.C.	26	9	22	33	48	23

The tables enable examination to be made of the extent to which conditions differ in different areas and different types of household. They show, for example, that deficiencies occur in respect of households which have a dwelling to themselves as well as in households which share a dwelling with another household, and that the deficiencies are most prevalent in the smallest dwellings. They show that, on the whole, the houses in rural areas are less well-served than their urban neighbours, particularly in the matter of water supplies and water-closets. They show some interesting regional variations, Yorkshire, Cheshire and Lancashire having the highest proportions of households with arrangements to themselves and Wales the lowest. They show some surprising figures for particular cities, which cannot be explained in terms of their age or the prevalence of households sharing dwellings.

This Report gives the results of the one per cent. sample taken from the 1951 Census records and analysed in advance to give a quick preview of the pattern of the main results which will not be fully available for some years. It is published by H.M.S.O. in two parts (Part I, price 17s. 6d. net, Part II, price £2 net).

(For **NOTES** see page 20)

BLE I. Births, Deaths (distinguishing Deaths of Infants under 1 year of age) and Notifications of certain Infectious Diseases in the last 11 weeks with totals for the current and the two preceding years.

(a) London.

(b) Great Towns in the aggregate.†

(*See Notes on page* 20).

Note:—The deaths are not comparable with notifications if only because a certain number of deaths occur in the Great Towns (e.g., in hospitals) of cases which were notified in areas outside the Great Towns.

* These Great Towns do not comprise the whole of Greater London and the figures given do not aggregate to the Greater London total.

† The numbers of Deaths are provisionally corrected by transfer to place of normal residence, if in Scotland. Deaths of non-civilians are included.

‡ The numbers of Births and Deaths are provisionally corrected by the exclusion of all non-residents in the case of Belfast and of those occurring in institutions in Dublin. Returns of stillbirths are not made for these towns.

§ Except for London, this column includes all deaths where the term " Influenza " is mentioned on the certificate, e.g., influenzal pneumonia.

TABLE III.—Deaths (classified in accordance with the Abbreviated List* and at different age periods) registered in the week ended 3rd January, 1953, with totals from the first week of the year to date. **London.**

(*See Notes on page* 20).

* The Abbreviated List numbers are those set out on pages 361–2 of the International Statistical Classification of Diseases, Injuries and Causes of Death, 1948. The further breakdown indicated by small letters after the numbers is one used in the General Register Office; the corresponding numbers in the full List are shown in brackets after the description of the causes.

TABLE IV.—Notification of Infectious Diseases in the week ended 3rd January, 1953. } **England and Wales, Administrative Areas and Port Health Districts.**

(*See Notes on page* 20).

Note :—Where no return has been received an asterisk * is inserted in the columns. Totals shown against the names of counties include any associated county boroughs. Letters in the "Others" column denote the diseases so lettered in the summary headings.

* See Note 3.

Notes: (1) Broadly, the whole of the civilian *working* population aged 15 and over can now qualify under the National Insurance Act for sickness benefit without limit of income, including not only those employed under contract of service but also the self-employed. Only comparatively small sections of the working population are excluded, the most numerous being those employed married women who elect not to be insured in their own right.

(2) The National Insurance (Industrial Injuries) Act applies, broadly speaking, to all civilians working for an employer under contract of service or apprenticeship, corresponding closely with the class of " employed persons " under the main scheme.

(3) The weekly averages are usually for periods of four weeks, but the months are marked * when the average is for periods of five weeks.

TABLE VI.—Air Temperature, Rainfall and Sunshine in the week ended 3rd January, 1953. } Certain Great Towns in England and Wales and four Scottish and Irish Towns.

Daily Notes

Sunday—Sky obscured by fog until early afternoon, then cloudy, fog until late afternoon. Intermittent light rain and drizzle morning and afternoon; light to moderate rain in evening. Dew in morning.

Monday—Cloudy. Light rain in early morning. Fresh wind 04.30h.—11h., 11.55h.—12h. (ENE).

Tuesday—Cloudy. Fog, thick 10.50h.—17h., from morning until mid-evening, then mist.

Wednesday—Cloudy until around mid-day, then fair to fine, fair late. Continuous light to moderate rain, heavy at times, in morning. Mist in morning; mist and fog in evening. Frost in evening.

Thursday—Cloudy. Light to moderate rain morning and afternoon, heavy at 13.10h., 13.20h. Intermittent light drizzle late. Fog early; mist in afternoon. Fresh NNE wind at times in afternoon and evening.

Friday—Generaly cloudy, but a period around mid-day when cloudless. Mist in evening, then fog. Dew and frost in evening.

Saturday—Cloudy. A slight shower in afternoon, and a moderate snow shower. Intermittent light sleet late. Mist 15.15h. Fresh wind 12.20h.—12.45h. (NNE).

The reading of the barometer fell from 1003.2 mbs. at beginning of week to 999.1 mbs. at 13.15h. on 28th, rose to 1019.5 mbs. at 10h. on 30th, fell to 992.5 mbs. at 18.25h. on 31st, rose to 1018.8 mbs. at end of week.

Explanatory Notes

The results apply to the civil day, i.e. from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 34 feet above the mean level of the sea.

Observations are taken at 6h. and 9h. A.M., noon, 3h, 6h. and 9h. P.M. The readings of the barometer shown in column 3 (in millibars) and of the air temperature shown in column 6 (in degrees Fahrenheit), are the means of 24 hourly values derived from photographic records.

The average temperature of the air is that derived from an analysis of the observations made at Kew during the 80 years ended 1950. In reading column 7 it should be borne in mind that + indicates "*higher*" and — "*lower*" than the average.

The measure of humidity now shown in column 8 is the partial pressure of water vapour (in millibars).

The numbers in column 10, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The degree of atmospheric pollution, as measured by the Owen's Smoke Filter, is shown by the maximum, minimum and mean readings for each day (in milligrammes per cubic metre) in columns 12, 13 and 14.

NOTES

1. General.—**The figures in this Return are provisional.** Births and deaths (Tables I, II and III) and notifications of infectious diseases (Tables I and IV) are compiled from returns furnished to the Registrar General by Registrars of Births and Deaths and Medical Officers of Health respectively. The figures of new claims to sickness benefit made under the National Insurance Act and injury benefit under the National Insurance (Industrial Injuries) Act (shown in Table V) are supplied by the Ministry of National Insurance. Meteorological data (Tables VI and VII) are supplied by the Director of the Meteorological Office. Many of the tables are prepared and published by virtue of the Registrar General's express powers to make arrangements with other Government Departments and Local Authorities in fulfilment of his statutory duty to collect and publish from time to time statistical information with respect to the number and condition of the people and otherwise to further the supply and provide for the better co-ordination of such information.

2. Definition of areas.—"London"=administrative county of London; "Great Towns"=London, all county boroughs and, in addition, municipal boroughs and urban districts within whose present area there was a resident population exceeding 50,000 at the Census, 1951; "C.B."=county borough; "M.B."=municipal borough; "U.D."=urban district. "Greater London"=aggregate of the city of London and of the boroughs and county districts falling entirely within the area of the Metropolitan Police District as defined in the Police Act, 1946, i.e., an area of approximately 15 miles radius from Charing Cross.

3. Non-civilian deaths are *included*.

4. Births and deaths for Greater London, London and other Great Towns are those ***registered*** in the area and have *not* been allocated to the area of residence.

5. Cause of death assignments (Tables II and III) are provisional, and final figures are compiled annually; those for Greater London, London and the County Boroughs are distinguished separately in Tables 20 and 21 of the Registrar General's annual Statistical Review, Tables, Part I (Medical).

6. Notifications of infectious diseases are the numbers originally notified (late notifications are given at the end of Table IV). The numbers after correction for diagnosis are published in the Registrar General's Quarterly Return and Statistical Review, Tables, Part I (Medical).

7. Summaries of the Weekly Returns adjusted for late returns or corrections are published in the Registrar General's Quarterly Return and final figures in the annual Statistical Reviews.

NON-WEEKLY STATISTICS

The following additional information relating to England and Wales as a whole is published *on this page* immediately below this note as soon as available.

Quarterly (a) Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under 1 year of age—about the third week following the quarter. (For further quarterly statistics *see* the Registrar General's Quarterly Return).

(b) Final forecast of the number of births to be expected in the current quarter and a provisional similar forecast for the following quarter—by the end of the first month of each quarter.

Annual Numbers and rates of live births, stillbirths, *total* deaths, and deaths of infants under one year of age—about the third week in January.

Death rates from Tuberculosis and Cancer, Maternal Mortality and also Neo-natal Mortality—about the end of April.
